WORK EXPERIENCE

Gogodinosaur (part time) **Oct. 2021 – Present**
Self Employed Game Developer *Oakland, CA*

- Currently developing Stellar Archipelago using Unreal for release on Steam
- Developed and released Merchant Isle on Steam using Unreal
- Created a procedural character interaction generator that generates D&D style characters and interactions describing how the characters relate to one another

Kilpatrick Townsend & Stockton (some years part time) **Jul. 2017 – Present**
Patent Agent *San Francisco, CA*

- Collaborate with inventors about inventive concepts relating to PAN tokenization, blockchain, elliptic curve cryptography, etc.
- Manage and draft technical documentation and patent applications based on inventor descriptions and white papers on strict deadlines
- Guide creation of patents based on needs from different teams

Berkeley City College (part time) **Jan. 2025 – Present**
Instructor *Berkeley, CA*

- Create educational lessons that are based in Blueprints in Unreal Engine
- Teach Introduction to Game Scripting and Video Game Development classes

Laboratory for Atmospheric and Space Physics **Jan. 2016 – May 2017**
Undergraduate Researcher *Boulder, CO*

- Analyzed Mars Atmosphere and Volatile Evolution Mission (MAVEN) data
- Examined auroral acceleration data using a solar wind electron analyzer

Boston University **Summer 2016**
Undergraduate Researcher *Boston, MA*

- Awarded a research experience for undergraduates (REU) by the National Science Foundation and examined the effects of solar wind on the Venusian ionosphere using Pioneer Venus Orbiter data
- Extracted ionospheric radio occultation data from archived articles to open the data to the community

Institute of Arctic and Alpine Research **May 2013 – Jan. 2014**
Undergraduate Researcher *Boulder, CO*

- Maintained and operated a gas chromatography unit
- Compiled resulting data into plots in Excel using VBA to improve efficiency

GAMES & MODS

Merchant Isle - A Language Based Metroidvania

- Designed an economy for trading goods based on NPC preferences
- Created a language learning system, where players learn words to unlock new ways of interacting with the world

Eventful (Humankind Mod) - Narrative Events

- Created a mod for the 4X strategy game Humankind using Unity that adds more events into the game's narrative system
- Became the 8th most subscribed mod for Humankind with more than 23,000 downloads

EDUCATION

University of Colorado Boulder

BA Physics | BA Astronomy | Minor in Space

- Member of physics honors society - Sigma Pi Sigma

Graduated May, 2017

Boulder, CO

SKILLS & ABILITIES

Programming Languages

- Extensive experience in C#
- Working experience in Matlab, IDL, Mathematica, Python, and VBA
- Previous experience in IRAF and C++

Tools

- Game engines: Unity and Unreal Engine
- IDEs: Microsoft Visual Studio and Sublime Text
- Source control systems: Git / GitHub and Perforce
- Development methodology knowledge and software: Scrum, Agile, and Trello
- Art tools: MagicaVoxel and Aseprite
- Other: Cura, TinkerCAD, and MS Office Suite (Word, Excel, Visio, etc.)

Technical Experience

- Worked with a team in University to design, build, and launch a balloon satellite. Recorded data up to 100,000 ft in altitude. Interpreted data at an exhibition booth to 75+ people.
- Designed and built a two lead electrocardiogram with a partner as a proof of concept for miniaturization. Circuits were placed in an EM shielded box to reduce ambient background noise so that we could measure the ~1mV and ~1Hz signal.
- Designed, programmed, 3D modeled, and built a painting machine using a single board computer (Le Potato), python, and a 3D printed frame.

- Observed exoplanet WASP-33b with the 24-inch telescope located at Sommers-Bausch Observatory. Worked with a partner to create a custom photometry program in Python.
- Observed an M dwarf star using the DIS spectrograph at the 3.5-meter Apache Point Observatory in New Mexico. Examined relations between visible and ultraviolet emissions.
